_____

How we do

An offshore development center offers a development team with the office infrastructure and employees needed to finish the development process, including administrative and support resources. It is a specialized and tailored facility for executing projects. The team and infrastructure are built as per the client's requirements and specified processes, making it essentially an offshore extension of your company. We help to drive growth and efficiency to products, services, customer experiences, and overall business operations.

Building an ODC is a highly professional endeavor requiring a high degree of competence, experience, and skill set. Our successful Offshore Development Center Setup process consists of the following steps:

- **Offshore Development Center Setup Planning** - The planning meeting establishes objectives, creates a milestone timeline, risk identification, resourcing needs, craving a well-defined roadmap, conducts analysis, and starts the initial work.
- **Location Setup** - Identification & setting up the right site/location is the key to any ODC. This primarily depends upon the pool of skills set required for the ODC.
- **Laying down & following of Fundamental Processes** for all the business functions related to the ODC. This enables the ODC to operate and perform across all the departments.
- **Deploying Hiring Managers & the CORE team** - This team paves the way for culture, values, engineering style, and performance of the ODC.
- **Setting up the Management & HR Support function** for working on issues related to the operations/activities being performed at the ODC.
- **Hiring the right mix of talent as per the need/requirement/budget of the client**

We strive to focus on the following:

- **Quick Ramp up time**
- **Reasonable & Transparent Pricing**
- **Fully committed team working as per the desired KPIs**

_____

We give the following advantages while setting up your ODC
